

products AND SERVICES

As vehicular traffic on the UK's roads continues to increase, the bicycle is becoming a more attractive alternative. Cyclists are one of the most vulnerable of road user's, however research by the Department of Transport has revealed that coloured cycle lanes prevent drivers encroaching into the cyclist's path, particularly at advanced stop lines, and therefore provides a safer environment for cyclists.

CYCLETRACK

- Light duty hot screed applied thermoplastic
- Suitable for application onto most substrates including S.M.A.
- All year round application
- More durable than paints and slurry seals
- Available in various colours including Red, Green, Yellow, Blue, Black & Buff
- Fast to install with minimum disruption to traffic
- Suitable for lightly trafficked areas
- Can be used in conjunction with Textureflex

TEXTUREFLEX

- Heavy duty hot screed applied thermoplastic
- Suitable for application onto most substrates including S.M.A.
- All year round application
- Fast to install with minimum disruption to traffic
- Ideal for cycle lanes heavily trafficked by vehicles ie. advanced stop lines and across junctions
- Can be used in conjunction with Cycletrack
- Available in various colours including Red, Green, Yellow, Blue, Black & Buff
- Suitable for areas regularly trafficked by vehicles

TYREGRIP

- Pigmented epoxy binder and aggregate
- Excellent finished appearance – no joins, seams or ripples
- High impact delineation
- Bright finish with pigmented binder complementing the aggregate colour
- Ideal for use on high stress/heavily trafficked sites
- Bespoke aggregate and binder colouring service
